The TAINY HMOD-L1-IO from Dr. Neuhaus Telekommunikation is a GPRS/EDGE/UMTS/HSDPA* radio router to access the internet or a private network.

The integrated firewall provides extensive additional protection for the application against unauthorized access – resulting in a perfect combination of security and flexibility.

Intelligent communication supervision guarantees the stability and availability of the connection. This provides an uncomplicated way of incorporating remote.

Thanks to the compact plastic housing in standard design it is optimized for top-hat rail mounting in control cabinets.

***EDGE:** Enhanced Data Rates for GSM Evolution refers to a technology for increasing the data transfer rate in GSM mobile radio networks by introducing an additional modulation procedure. EDGE enables further GPRS enhancement to speed up data transfer by one to five times.

HSDPA: High Speed Downlink Packet Access is a UMTS mobile radio standard transfer method. The method enables DSL-like transfer speeds on a mobile radio network, thus enabling mobile transfer of large data volumes.
